

Time and Attendance for Long Term Healthcare

Does the challenge of scheduling the right number of RNs, LPNs, and medical assistants cost you overtime or cause understaffing problems? Do you worry that your facilities are not in compliance with Federal and State requirements or professional standards for caregiver-to-patient ratios?

Improving patient care while reducing labor costs is the primary goal in Long Term Healthcare. Attendance on Demand automatically leverages your skilled workforce by monitoring patient census data and anticipating the care providers required, by job type, for a full 28-day schedule. Attendance on Demand detects employee absences and suggests replacement employees with equivalent certifications and hours available. Schedule adjustments are quick, easy, and reduce overtime costs.

Attendance on Demand knows that patient care is important. Tools for staffing coordinators, managers, administrators, and payroll/HR take away the burden of manual calculations and staff scheduling. Errors are eliminated and processes can be audited to ensure compliance with important patient-focused regulations.

Attendance on Demand is a hosted time and attendance system with full capabilities for labor management, scheduling, timekeeping, accruals, incidents, budgets, and more.

Streamlined Scheduling for the Staffing Coordinator

Staffing coordinators face the challenge of effectively anticipating and scheduling workforce for care providers. Attendance on Demand can help by providing:

- Useful 28-day schedules to post
- Easy scheduling and compliance with mandated labor ratios of nurses to patient
- At-a-glance view of employees working now and those who are scheduled to work
- Simple method for selecting available replacement staff with similar skills and certifications

Tools for Managers

Attendance on Demand helps managers responsible for tracking time and attendance for a group of employees. Easy-to-use dashboards cut through the paperwork and present only the information that requires immediate attention. For example, the Director of Nursing can quickly perform time card edits, authorize time cards, and access scheduling views and reports for any date range.

Managers can view the employees on site working, and those who need schedule replacements.
